

The background of the slide is a close-up photograph of a pile of wood chips and mulch. The chips are light brown and tan in color, with some darker, reddish-brown wood visible. They are scattered and piled together, creating a textured surface.

Biomass production and wastewater purification in *Salix* plantations

Katrin Heinsoo

Andres Koppel

The background of the slide is a close-up photograph of a large pile of wood chips or mulch. The chips are light brown and tan in color, with some darker, charred pieces interspersed. They are irregular in shape and size, creating a textured, organic pattern.

Wood as an energy resource

- traditional
- a lot of consumers
- simple technology
- sustainable

- large area needed
- a lot of work
- economically not very profitable

Planting
